Metallic and ceramic materials play a significant role in the development of modern science and technology. They have a broad range of applications in various engineering fields. A proper manufacturing process, heat treatment, and forming are three main processes that can lead to obtaining metallic and ceramic materials which are created mainly to discover new or improved materials of construction, e.g., due to their strength properties. The main aim of this Special Issue was to publish original review and research articles from a wide range of research fields involving the manufacturing, heat treatment, and forming processes of metallic and ceramic materials.
