Mass spectrometry was initially developed to determine molecular weight. It is becoming more and more powerful and widely used in complex analysis. Mass-spectrometry-based technology is one of the frontiers in biomedical and food analysis, especially in the era of metabolomics, foodomics, and so on.

This is a reprint of a Special Issue of *Molecules* titled “Mass Spectrometry for Biomedical and Food Analysis”, providing an overview on recent trends. Biomedical and food analysis has always been an important topic and has received remarkably positive feedback from numerous geographically diverse scientists. The sensitive and accurate detection of related components (metabolites, proteins/peptides, drugs, nutrient contents, pesticides, and so on) is vitally important to explaining the molecular mechanisms of biological functions that guarantee food safety and people’s health. As a result, five works focused on biomedical analysis and seven focused on food analysis in this reprint. In biomedical analysis, topics covered active drug and tumor biomarker discovery, metabolic pathways, novel matrices, and depressive disorder treatment. In food aspects, topics include certified reference material development, pesticide residue analysis methods, fragmentation pathways of flame retardants, as well as the identification and detection of nutritional components. All 12 contributions cover the latest advances and we hope it will benefit readers in this field.

MDPI Books offers quality open access book publishing to promote the exchange of ideas and knowledge in a globalized world. MDPI Books encompasses all the benefits of open access – high availability and visibility, as well as wide and rapid dissemination. With MDPI Books, you can complement the digital version of your work with a high quality printed counterpart.

## Open Access

Your scholarly work is accessible worldwide without any restrictions. All authors retain the copyright for their work distributed under the terms of the Creative Commons Attribution License.

## Author Focus

Authors and editors profit from MDPI's over two decades of experience in open access publishing, our customized personal support throughout the entire publication process, and competitive processing charges as well as unique contributor discounts on book purchases.

## High Quality & Rapid Publication

MDPI ensures a thorough review for all published items and provides a fast publication procedure. State-of-the-art research and time-sensitive topics are released with a minimum amount of delay.

## High Visibility

Due to our global network and well-known channel partners, we ensure maximum visibility and broad dissemination. Title information of books is sent to international indexing databases and archives, such as the Directory of Open Access Books (DOAB), and the Verzeichnis Lieferbarer Bücher (VLB).

## Print on Demand and Multiple Formats

MDPI Books are available for purchase and to read online at any time. Our print-on-demand service offers a sustainable, cost-effective and fast way to publish MDPI Books printed versions.
