Cardiovascular disease is currently a prominent threat to human health and despite recent advances, much remains to be done. Through this Special Issue, we aimed to shed a light on significant developments in both clinical and basic research within this field. This collection of articles explores topics such as novel predictors of cardiovascular disease, molecular intricacies of atherosclerosis, innovative prevention strategies and cutting-edge treatment modalities. Each article serves as a stepping stone toward an improved quality and longevity of life for individuals at risk of cardiovascular disease.

We cordially invite you to read this reprint of our Special Issue. While these articles cover only a fraction of the vast field of cardiovascular research, they offer a glimpse into the current state of the art and the promising future that lies ahead.
