This Special Issue reports several findings from investigators in different areas of drug toxicity. The effects of several abused drugs (e.g. ethanol, hydrocodone, and heroin) are reported, and the attenuating effects of certain drug targets were also reported. Other research studies report the toxic effects of certain drugs and medications (e.g. pentylenetetrazol, metronidazole, paracetamol, paclitaxel, and tilmicosin) and the therapeutics effects of certain agents and plant extracts in animal models.
