Edited by Nicolas Tournier Toshihiko Tashima

ISBN 978-3-7258-0680-5 (Hardback) ISBN 978-3-7258-0679-9 (PDF)

It is well known that the blood-brain barrier (BBB), substantially composed of tight junctions between the capillary endothelial cells and efflux transporters such as MDR1 at the apical membrane of the capillary endothelial cells, prevents drugs from entering the brain. Accordingly, drug delivery into the brain across the BBB is a challenging task, particularly in central nervous system diseases such as Alzheimer's disease and Parkinson's disease, as well as brain cancers such as glioma. It is true that drugs in systemic circulation go through intentional membrane disruption or intentional tight junction disruption into the brain across the BBB, but bystander harmful compounds can enter the brain together. Moreover, although craniotomy is often conducted for surgical removal or direct drug administration, this process burdens and torments patients. Thus, non-invasive, device-mediated brain drug delivery across the BBB should be developed to improve not only patient health, but also quality of life. At present, brain drug delivery systems that utilize biological transport machineries such as carrier-mediated transport, receptor-mediated transcytosis, lipid-raft-mediated transcytosis, or macropinocytosis at the BBB have been extensively investigated. This Special Issue aims to share recent progress and trends in this field.

MDPINBOOKS Publishing Open Access Books & Series

MDPI Books offers quality open access book publishing to promote the exchange of ideas and knowledge in a globalized world. MDPI Books encompasses all the benefits of open access – high availability and visibility, as well as wide and rapid dissemination. With MDPI Books, you can complement the digital version of your work with a high quality printed counterpart.

Open Access

Your scholarly work is accessible worldwide without any restrictions. All authors retain the copyright for their work distributed under the terms of the Creative Commons Attribution License.

Author Focus

Authors and editors profit from MDPI's over two decades of experience in open access publishing, our customized personal support throughout the entire publication process, and competitive processing charges as well as unique contributor discounts on book purchases.

High Quality & Rapid Publication

MDPI ensures a thorough review for all published items and provides a fast publication procedure. State-of-the-art research and time-sensitive topics are released with a minimum amount of delay.

ᆔ

High Visibility

Due to our global network and well-known channel partners, we ensure maximum visibility and broad dissemination. Title information of books is sent to international indexing databases and archives, such as the Directory of Open Access Books (DOAB), and the Verzeichnis Lieferbarer Bücher (VLB).

Print on Demand and Multiple Formats

MDPI Books are available for purchase and to read online at any time. Our print-on-demand service offers a sustainable, cost-effective and fast way to publish MDPI Books printed versions.
