Digital transformation is an unavoidable fact that can contribute decisively to increasing sustainability in its different components: economic, environmental, and social. Although the economic aspect is the one that normally stands out in terms of research, the environmental and social aspects are increasingly important due to the increasing importance that they are having in our daily lives as they interfere with extreme climate phenomena and our quality of life at work. Therefore, this reprint assumes a decisive importance in this context, containing several works of very high quality that address digital transformation, innovation, and sustainability, thus revealing how the scientific community is attentive to and interested in these phenomena, contributing in a decisive way to increasing the level of knowledge in these areas.
