Interest in sustainability is constantly increasing, spanning all domains, from scholars and policy makers to practitioners all over the world. Moreover, the quest for greater sustainability has extended to encompass various non-economic arenas, including educational institutions such as universities. The concept of the “triple bottom line” highlights the three dimensions, i.e., economic, social and environmental, that must be considered in all human activities. Sustainable development goes hand in hand with digitalization, innovation and performance to create a suitable environment and conditions for a more sustainability-driven, prosperous, fair and peaceful economy and society for the future. When integrating coherent strategies for sustainable development, relevant research directions and policies focusing on the implementation of sustainability are a necessity.
