Human activities, particularly habitat loss, overexploitation for economic gain, and climate change, are considered responsible for the current biodiversity crisis. Wildlife conservation and management research focuses on efforts to avert the loss of species and their habitats, address societal issues, and ultimately contribute toward a sustainable world for future generations.

In the Special Issue "Wildlife Conservation: Managing Resources for a Sustainable World", we present a collection of state-of-the-art research on the conservation and management of wildlife species under the framework of sustainability. In this volume, wildlife conservationists and managers will find a holistic view of the current problems and proposed solutions that could be useful as a guide for successfully designing and implementing conservation and management plans.
