The current Special Issue brought out the newest trends in Econophysics that have made use of the most recent available tools, such as Big Data. The emphasis of the reprint is on deciphering the effects of current world events, such as the repercussions of the recent war conflicts, the oil and gas crises, the abrupt rise of the prices of commodities, the new findings in environmental issues, etc. The focus is on understanding how these events affect the economy, and this is achieved by casting the parameters in multiplex networks, thus bringing out their interactions in an effort to understand how to better cope with them.
