This is a reprint of articles from the Special Issue published online in the open access journal *Minerals* (ISSN 2075-163X). We hope that “Advances on Fine Particles and Bubbles Flotation” will not only serve as a valuable resource for academia, but will also inspire curiosity and spark further inquiry into fine resource recovery theory and application. As we embark on this intellectual journey, may the pages that follow serve as a beacon, guiding readers through information on fine particle flotation progress.
