This reprint aims to present the latest achievements in biomaterials science regarding the repair or replacement of tissue functions in the human body. In this reprint, leading experts describe their latest research in the field, including innovative methods for the design of enhanced cochlear implants, cranial implants, and bone implants (jaw, tibia, femur, knee, and hip). Other research works presented in this reprint describe novel methods for the detection of lung cancer, the monitoring of blood glucose, the use of adhesives for orthopedic applications, and the 3D printing of artificial organs.
