This reprint delves into the advanced methodologies and cutting-edge technologies used in the field of micro and nano manufacturing; it provides an exploration of the theoretical foundations and practical applications of various manufacturing processes at the micro and nano scales. It covers topics including micro/nano-structured surfaces, simulation and experimental investigation of laser manufacturing, process optimization, and the latest advancements in micro/nano manufacturing techniques. Graduate students, engineering technicians, and researchers in related areas will benefit from the findings shown in this reprint.
