This reprint compiles cutting-edge research from 74 authors across 18 countries, addressing the critical challenges facing forest ecosystems worldwide. With deforestation progressing at alarming rates and environmental hazards intensifying, this work presents interdisciplinary perspectives on sustainable forest management and risk mitigation strategies. The articles in this collection highlight the necessity of advanced techniques, reliable data, and tailored approaches to achieve long-term sustainability and resilience. They emphasize the complex interplay between human activities and environmental health, advocating for the integration of innovative methodologies in forest management, ecological restoration, and occupational safety.

Key topics covered include the following:

- Innovative strategies and technologies for sustainable forest management and hazard prevention;
- Risk and vulnerability assessment frameworks;
- Adaptation programs to enhance ecosystem resilience;
- Historical impact analysis and future vulnerability predictions under climate change scenarios.
