## Novel Therapies of Oxidative Stress-Induced Age-Related Neurodegenerative Diseases

**Edited by: Ana-Maria Buga and Carmen Nicoleta Oancea**

This Special Issue aims to address several important questions regarding the relationship between neurodegenerative disorders and oxidative stress: First, (i) is the process of neurodegeneration a “one-way ticket” to neuronal death, programmed early in life? And second, (ii) can it be prevented by neuroprotective interventions? The growing body of literature on nutraceuticals, nutrigenomics, and nutrigenetics demonstrates their promise as powerful neuroprotectors for future novel therapies that naturally enhance antioxidant capacity. Furthermore, different active compounds that target oxidative stress prove their efficiency. In this Special Issue, experts in the field share their research findings and review the latest findings in the field of neurodegenerative disorder interventions and disease mechanisms. With this collection of articles, we provide some future direction for clinicians and patients dealing with neurodegenerative diseases.
