Supercritical Technology Applied to Food, Pharmaceutical and Chemical Industries

Edited by: Maria Angela A. Meireles , Ádina L. Santana and Grazielle Náthia-Neves

Supercritical-fluid-based technologies have emerged as unit operations in the chemical industry in the last few decades and have been selected as the answer to current demands for sustainability in industrial processing. The following Special Issue contains updated experimental research and comprehensive reviews on the use of different techniques involving supercritical fluids and pressurized liquids, including extraction, chemical reactions, encapsulation, and sterilization.
