Transitioning to Affordable and Clean Energy is a collective volume that combines original contributions and review papers addressing the question of how the transition to clean and affordable energy can be governed. It will cover both general analyses of the governance of transition, including policy instruments, comparative studies of countries or policies, and papers setting out scientifically sound visions of a clean and fair energy system. In particular, the following aspects are foregrounded:

- Governing the supply and demand side of transformation
- Geographical and cultural differences and their consequences for the governance of energy transitions
- Sustainability and justice related to energy transitions (e.g., approaches for addressing energy poverty)
