† Presented at the 16th International Workshop on Advanced Infrared Technology & Applications, 26–28 October 2021; Available online: https://aita2021.sciforum.net/.

Abstract: The 16th International Workshop on Advanced Infrared Technology and Applications (AITA 2021) was held online on 26–28 October 2021.

Keywords: non-destructive testing and evaluation; remote sensing; environmental monitoring; materials; bio-medical applications; image processing

1. Introduction

Since 1992, AITA is an international conference aimed to assess the state of the art of technology in the infrared bands and to present its most interesting applications. The last AITA was held in Florence in 2019, where the idea of this conference series was launched 25 years ago, thanks to the efforts and commitment by the Fondazione “Giorgio Ronchi” led by Prof. Laura Ronchi Abbozzo.

The 2021 edition was planned to be organized in Venice, but due to the pandemic situation, it was impossible to hold an in-person meeting. To keep the flame alive in spite of the persisting situation, the 16th International Workshop on Advanced Infrared Technology and Applications (AITA 2021) has been organized as an online event by:

- Istituto per le Tecnologie della Costruzione (CNR-ITC);
- Istituto di Fisica Applicata “Nello Carrara” (CNR-IFAC);
- Istituto di Scienza e Tecnologie dell’Informazione “Alessandro Faedo” (CNR-ISTI);
- Istituto di Biofisica (CNR-IBF);
- Istituto di Scienze dell’Atmosfera e del Clima (CNR-ISAC);
- Politecnico di Torino;
- Fondazione “Giorgio Ronchi”.

Moreover, two institutions have offered their patronage to the event: The Italian Association of Infrared Thermography, Diagnostics and Condition Monitoring (AITI—DMC) and the Italian Society for Nondestructive Testing and Monitoring Diagnostics (AIPnD).

2. Conference Days

The event was held online from 26 to 28 October 2021. The technical program was organized in six sessions covering the following topics: the Under 35 Best paper award, Non-destructive testing, Remote sensing and environmental monitoring, Materials, Bio-Medicals and Image processing.

Each day, the Conference was divided in a pre-recorded session and a live session. The daily pre-recorded session presentations were streamed thrice to accommodate the different time zones. The live panel discussion was placed at the end of the streaming session and included keynotes, question and answer (Q&A) and sponsor presentations. In spite of the limited available time, the authors had the possibility to provide interesting additional information to the works they had submitted to the conference.

A plenary lecture was delivered by Prof. Jean-Christophe Batsale from ENSAM in Bordeaux, France. His contribution, entitled “Multispectral and multiscale infrared imaging for the study of heat and mass transfer in heterogeneous media”, described interesting applications that, starting from the physical modeling of the Thermal Non-Destructive Evaluation of delaminations in composite materials, extends to the evaluation of anisotropic thermal diffusion. Novel and worthwhile results have been shown in the assessment of thermophysical properties of heterogeneous materials and in mapping the flow distribution from NIR to THz.

Almost 40 papers were submitted to the conference and are published in a Special Issue of MDPI's *Engineering Proceedings* [1].

3. Fifth under 35 Best Paper Award

For the fifth time in the AITA Conference, the AITA Committee assigned a best paper award to presenting authors under 35 years old. The award is named after Ermanno Grinzato, AITA co-chairman for a long time and known scientist in the thermography community. The award supports young scientists that are involved in scientific research on the conference topics.

The nine candidates submitted works of high interest for the AITA community and, due to the quality of their contributions, the award committee decided to assign the prize to three authors, equally placed:

- Jue Hu (3D non-destructive inspection using novel infrared-terahertz fusion approaches) [2];
- Ryohei Fujita (Micro-scale Fatigue Damage Assessment of CFRP Laminates Using Lock-in Thermography) [3];
- Giuseppe Dell’Avvocato (Evaluation of effectiveness of heat treatments in boron steel by laser thermography) [4].

4. Committees

*General chair*
L. Ronchi Abbozzo
Fondazione Giorgio Ronchi, Firenze, Italy

*Co-Chair*
P. Bison
CNR-ITC, Padova, Italy

M. D’Acunto
CNR-IBF, Pisa, Italy

X. Maldague
Laval University, Quebec City, QB, Canada

D. Moroni
CNR-ISTI, Pisa, Italy

V. Raimondi
CNR-IFAC, Firenze, Italy

A. Rogalski
Military University of Technology, Warsaw, Poland

T. Sakagami
Kobe University, Kobe, Japan

M. Strojnik
CIO, León, Guanajuato, Mexico
Scientific Committee
D. Balageas, ONERA, Chatillon, France
E. Dereniak, University of Arizona, Tucson, AZ, USA
C.T. Elliott, Heriot-Watt University, Edinburgh, Scotland
C. Maierhofer, BAM, Germany
C. Meola, University of Napoli, Napoli, Italy
H.N. Rutt, Southampton University, Southampton, United Kingdom
G. Steenackers, University of Antwerp, Antwerp, Belgium
V.P. Vavilov, Tomsk University, Tomsk, Russia
M. Volinia, Politecnico di Torino, Torino, Italy

Organizing Committee
P. Bison, CNR-ITC, Padova, Italy
G. Cadelano, CNR-ISAC, Padova, Italy
M. D’Acunto, CNR-IBF, Pisa, Italy
G. Ferrarini, CNR-ITC, Padova, Italy
D. Moroni, CNR-ISTI, Pisa, Italy
V. Raimondi, CNR-IFAC, Firenze, Italy
M. Volinia, Politecnico di Torino, Torino, Italy

Technical Support
S. Rossi, CNR-ITC, Padova, Italy
M. Tampucci, CNR-ISTI, Firenze, Italy

Funding: This research received no external funding.

Acknowledgments: We would like to thank the companies Teledyne FLIR, Telops and Horiba for supporting this event.

Conflicts of Interest: The authors declare no conflict of interest.
