Missing Supplementary File

In the original publication [1], a supplementary file, “The Target Hazard Quotient (THQ) Calculator”, was not published. This file has now been added to the online version of the article and is listed in the Supplementary Materials Section.

Text Correction

Due to the updated supplementary files, references had to be revised accordingly. A correction has been made to Sections 3.1 and 3.4:

“Detailed descriptive statistics, including medians, interquartile ranges, and outliers, are provided in Supplementary Tables S1 and S2.”

“the calculator calculates the THQ value and informs the user whether there is a non-carcinogenic health risk associated with oral consumption of fluoride with tea infusion (THQ ≥ 1) or not (THQ < 1) (see ‘Supplementary Materials: THQ Calculator’).”

Supplementary Materials

Readability of the Supplementary Tables S1 and S2 has been corrected. Additionally, units have been added to the heading of Supplementary Table S2 as they have been initially omitted.

References

In references [72,74] of the original publication, “PH” has been corrected to “pH”.

The authors state that the scientific conclusions are unaffected. This correction was approved by the Academic Editor. The original publication has also been updated.
