Message from the Editor-in-Chief

I am delighted to introduce you to Endocrines (ISSN 2673-396X), an international, peer-reviewed, open access journal covering all areas of Endocrinology and Metabolism—from basic and translational science to practical and clinical implications for medical care. As the Editor-in-Chief of this new venture, I can inform you that I am supported by a dedicated Editorial Office and distinguished multidisciplinary Editorial and Reviewer Boards, providing their time and valuable contributions to the progress of Endocrines and its essential topics. Thanks to the full open access policy, all the articles published in Endocrines will gain high visibility and rapid dissemination, expeditiously capturing the attention of the international endocrine and metabolic community. Having founded a unique platform to communicate and discuss with endocrinologists and endocrine researchers throughout the world, without length restraints or publication delay, we are pleased to welcome you as one of our authors!

Author Benefits

- **Open Access** Unlimited and free access for readers
- **No Copyright Constraints** Retain copyright of your work and free use of your article
- **Thorough Peer-Review**
- **Discounts on Article Processing Charges (APC)** If you belong to an institute that participates with the MDPI Institutional Open Access Program
- **No Space Constraints, No Extra Space or Color Charges** No restriction on the maximum length of the papers, number of figures or colors
- **Rapid Publication** First decision provided to authors approximately 27.5 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2022)
**Aims and Scope**

*Endocrines* (ISSN 2673-396X) is an international, peer-reviewed, open access journal that provides an advanced forum for studies related to endocrinology. It publishes reviews, research articles, communications, and technical notes. There is no restriction on the length of the papers, and we encourage scientists to publish their results in as much detail as possible.

*Endocrines* covers all topics related to endocrinology, including but not limited to the following:

- Genetic, epigenetic, biochemical, and molecular aspects of endocrine research and cell regulation in mammalian systems
- Endocrine physiology
- Endocrine pathology and diagnostics
- Clinical aspects of endocrinology
- Thyroid
- Diabetes, obesity, and metabolism
- Parathyroid, bone, and mineral metabolism
- Adrenal gland and steroids
- Pituitary gland, hypothalamus, and neuro-immune–endocrine interactions
- Reproduction and pregnancy
- Developmental endocrinology
- Pediatric endocrinology and inborn errors of metabolism
- Endocrine hypertension and cardiovascular endocrinology
- etc
