Message from the Editor-in-Chief

Surgery, as in the 'stitching of wounds with bone needles', is the oldest form of medicine after the use of herbs, dating from 30,000 BC. Although some basic principles have not changed much, the technology has enormously progressed, especially in the last decades. Surgeries intends to provide a platform for all surgery-related developments, clinically as well as scientifically. The open access format guarantees global availability to the readers. The variety of subjects will be covered by a our enthusiastic, international, and interdisciplinary Editorial Board and our excellent editorial team. Next to their role in providing a rapid and high-quality review procedure, the editors will actively contribute by organizing Special Issues focused on topics of high interest. Together with authors and reviewers, we aim to develop Surgeries into an indispensable and easily accessible source of information for surgery-related professionals and beyond.

Author Benefits

- **Open Access**  Unlimited and free access for readers
- **No Copyright Constraints**  Retain copyright of your work and free use of your article
- **Thorough Peer-Review**
- **Discounts on Article Processing Charges (APC)**  If you belong to an institute that participates with the MDPI Institutional Open Access Program
- **No Space Constraints, No Extra Space or Color Charges**  No restriction on the maximum length of the papers, number of figures or colors
- **Rapid Publication**  First decision provided to authors approximately 21.6 days after submission; acceptance to publication is undertaken in 4.8 days (median values for papers published in this journal in the second half of 2022)
Aims and Scope

Surgeries (ISSN 2673-4095) aims to provide a platform on original theoretical, clinical, and experimental research and advances in all fields of surgery, including: state-of-the-art surgical innovations, postoperative therapy, and surgery-preventing strategies (i.e., Watch and Wait). We publish high-quality articles, reviews, communications, etc., including basic, translational, and clinical studies in basically all surgical disciplines. The topics related to this journal include but are not limited to the following:

Medical conditions after surgery
Dentistry and oral surgery
Surgical education, practice, and research
Gastrointestinal surgery
Bariatric and metabolic surgery
Urology
Cardiovascular surgery
Plastic surgery
Breast surgery
Thoracic surgery
Endocrine surgery
Colon and rectal surgery

Pediatric surgery
Neurosurgery
Hepato-biliary-pancreatic surgery
Hernia
Esophageal surgery
Head and neck surgery
Orthopedic surgery
Transplantation
Surgical translational research
Robotics and instrumentation
Image modeling and analysis
