Message from the Editor-in-Chief

In the modern technological society, engineers and designers must work together with a variety of other professions in their quest to find systematic solutions to complex problems. Instant development in science and technology has broadened the horizon of engineering. Meanwhile, it is creating a multitude of challenging problems in every aspect of modern life. Current research is interdisciplinary in nature, reflecting a combination of concepts and methods that often span several fields, such as mechanics, mathematics, electrical engineering, control engineering, and other scientific disciplines. This research often combines theoretical models with numerical simulations to solve problems or make predictions that may be used in industry or in people’s everyday life.

Author Benefits

- **Open Access** Unlimited and free access for readers
- **No Copyright Constraints** Retain copyright of your work and free use of your article
- **Thorough Peer-Review**
- **Discounts on Article Processing Charges (APC)** If you belong to an institute that participates with the MDPI Institutional Open Access Program
- **No Space Constraints, No Extra Space or Color Charges** No restriction on the maximum length of the papers, number of figures or colors
- **Coverage by Leading Indexing Services** Scopus, ESCI (Web of Science), Inspec, and many other databases
- **Rapid Publication** First decision provided to authors approximately 13.1 days after submission; acceptance to publication is undertaken in 4.9 days (median values for papers published in this journal in the second half of 2022)
Aims and Scope

The main goal of this journal is to publish research results in applied system innovation. The ultimate aim is to discover new scientific knowledge relevant to designs of the future, to enhance technological development in a range of industries and to improve welfare of people. We hope that this journal will enable interdisciplinary collaboration and networking between engineering and design technologists in the academic and industrial fields.

Potential topics include:

- Mathematical problems in electrical and mechanical system design
- Smart electromechanical system analysis and design
- Mathematical control theory and system design
- Computer-aided methods for procedure and manufacture design
- Engineering design methodology and optimization
- Computer and human–machine interaction
- Internet technology in systematic innovation
- Intelligent robots and their control
- Application to internet of things
- Mathematical problems in the design of industrial and visual products, and digital media
- Various computational methodology topics and design procedures
- Mathematical design techniques
