Message from the Editor-in-Chief

*Earth* journal is a publishing platform to promote discoveries related to the Earth and its components (atmosphere, oceans, land, cryosphere, biosphere, and humans). The journal serves as a publishing venue that views Earth from a holistic perspective and disseminates scientific papers with emphases on multidisciplinary approaches to understand the complexities and interactions occurring on a variety of spatial and temporal scales. Rapid turnaround time and full open access offer the opportunity to make research results immediately available to scientific communities and the general public.

Author Benefits

- **Open Access** Unlimited and free access for readers
- **No Copyright Constraints** Retain copyright of your work and free use of your article
- **Thorough Peer-Review**
- **Discounts on Article Processing Charges (APC)** If you belong to an institute that participates with the MDPI Institutional Open Access Program
- **No Space Constraints, No Extra Space or Color Charges** No restriction on the length of the papers, number of figures or colors
Aims and Scope

*Earth* (ISSN 2673-4834) is an international, peer-reviewed, open-access journal that provides rapid publication of articles covering all components of the environment, including humans. The journal focuses on all aspects of the Earth’s atmosphere, hydrosphere, pedosphere, biosphere, and anthroposphere. The goal of Earth is to provide a platform for multidisciplinary research on the interactions/connections among global environmental systems. It publishes regular research papers, reviews, communications, and letters.

The journal encourages significant contributions to our understanding of global environmental changes. We are open to submissions on all relevant topics and are particularly interested in the following areas of research:

- Environmental research on air quality, atmospheric changes, and monitoring
- Environmental impacts of climate change dynamics, mitigation, and adaptation
- Environmental research on hydrosphere, including water pollution, water quality, water resource management, and policies
- The interaction between land use/cover, land change, agriculture and forestry, and the environment
- Soil system and global environment
- Environmental system and global change ecology, biodiversity, resources management, and conservation
- The impact of natural and human-made disasters/risks on the environment
- Environment and food security
- The innovation of techniques in global environmental research
