Sclerosis
Welcome to Sclerosis, a journal dedicated to sclerotic diseases. Sclerosis is a term that encompasses a variety of conditions that involve the hardening and scarring of tissues and organs, such as multiple sclerosis, systemic sclerosis, and atherosclerosis. These diseases affect millions of people worldwide and pose significant challenges for diagnosis, management, and research. Sclerosis aims to provide a platform for the dissemination of cutting-edge research and clinical practice in this field. We believe that Sclerosis will become a valuable resource for the scientific and medical community, as well as for patients and caregivers.

Aims

Sclerosis (ISSN 2813-3064) is an international and interdisciplinary peer-reviewed open access journal, published quarterly online by MDPI. Sclerosis provides an advanced forum for studies on all aspects of sclerosis and related diseases. It publishes research papers, reviews, and communications. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the maximum length of the papers.
Scope

- Amyotrophic lateral sclerosis
- Atherosclerosis
- Focal segmental glomerulosclerosis
- Hippocampal sclerosis
- Lichen sclerosis
- Multiple sclerosis
- Osteosclerosis
- Otosclerosis
- Primary lateral sclerosis
- Primary sclerosing cholangitis
- Systemic sclerosis
- Tuberous sclerosis

Author Benefits

Open Access
Unlimited and free access for readers

Discounts on Article Processing Charges (APC)
If you belong to an institute that participates with the MDPI Institutional Open Access Program

Rapid Publication
First decisions in 16 days; acceptance to publication in 5.8 days (median values for MDPI journals in the second half of 2023)
