

1. Unknown compound - LRI 1021

2. Unknown compound - LRI 1121

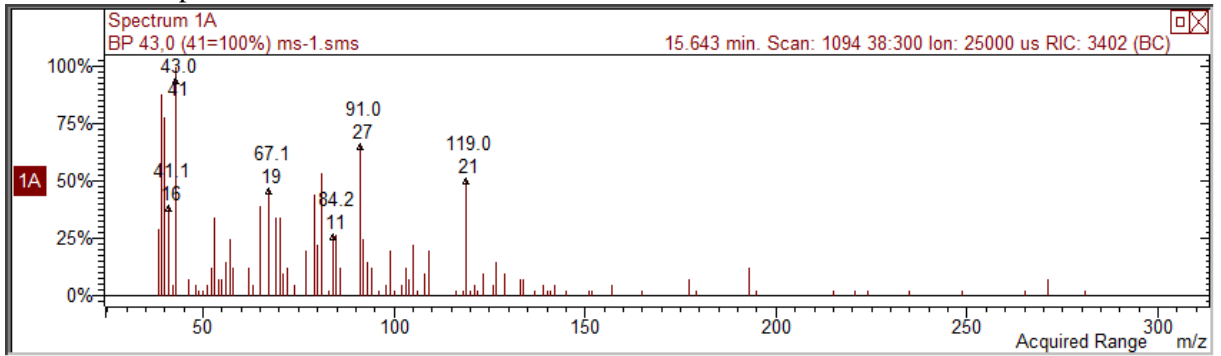

Figure 1 Mass spectra of unidentified VOCs in peppermint aroma profile. Both mass spectra was obtained by GC-MS analysis with Varian CP-3800/Saturn 2000 apparatus (Varian, Walnut Creek, CA, USA). MS operational conditions were as follows: ion source temperature: 250°C; electron impact (EI) ionization at 70 eV; scanning mode from 35 to 300 m/z .
