Supplementary Figure 1. **Zinc concentration in serum and body weight of mice fed low-zinc and high-zinc content diet.** (a) Mice were sacrificed, and blood was collected by cardiac puncture in order to analyze zinc serum concentration. (b) Mice were weighted. Data are shown as means ± SEM and were analyzed by one-way ANOVA with post hoc Dunnett’s test; (a) n=10, (b) n=5 for low-Zn content diet and n=6 for adequate and high-Zn content diet.
