processes](https://mdpi.com/journal/processes)

Section Information

The Separation Processes section of Processes focuses on fundamental principles, methodologies, and technological innovations in separation engineering. We aim to publish high-quality research that will advance the design, optimization, and application of separation processes across chemical, environmental, biological, materials, catalysis, petroleum industries, and allied engineering fields.

Section Editor-in-Chief

Prof. Dr. Tiancheng Mu

Author Benefits

Open Access

Unlimited and free access for readers

No Copyright Constraints

Retain copyright of your work and free use of your article

Thorough Peer-Review

2025 Impact Factor: 3.4

(*Journal Citation Reports* - Clarivate, 2026)

Discounts on Article Processing Charges (APC)

If you belong to an institute that participates with the MDPI Institutional Open Access Program

No Space Constraints, No Extra Space or Color Charges

No restriction on the maximum length of the papers, number of figures or colors

Journal Rank

CiteScore - Q2 (Chemical Engineering (miscellaneous))

Coverage by Leading Indexing Services

Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases

Rapid Publication

A first decision is provided to authors approximately 14.7 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2026)

Section Separation Processes

The Separation Processes section will include, but is not limited to, the following areas:

- Fundamental mechanisms and transport phenomena in separation processes
- Membrane technologies (microfiltration, ultrafiltration, nanofiltration, reverse osmosis, gas separation, pervaporation, forward osmosis, pervaporation reverse osmosis, membrane distillation, etc.)
- Distillation, extraction, adsorption, absorption, crystallization, and precipitation processes
- Chromatographic separation and purification technologies
- Solid–liquid, liquid–liquid, gas–liquid, and supercritical fluid separation processes
- Hybrid and intensified separation processes (membrane–reactor systems, reactive distillation, adsorption–reaction coupling, etc.)
- Separation processes for bioproducts, pharmaceuticals, and food components: downstream processing of proteins, antibodies, nucleic acids, vaccines, exosomes, chiral drug resolution, removal of genotoxic impurities, and online separation in continuous manufacturing, etc.
- Separation and purification in environmental applications: water/wastewater treatment, air pollution control, resource recovery
- Separation processes in energy systems: hydrogen purification, carbon capture, solvent regeneration, battery material recovery, and precious metal recovery
- Separation processes in catalytic systems: catalyst recovery and recycling, reaction–separation coupling for enhanced catalytic performance; catalytic reactors for selective product removal and enhanced conversion; reactive separation techniques for equilibrium-limited reactions; downstream purification of catalytic products derived from biomass conversion, petrochemical synthesis, and fine chemical manufacturing
- Advanced materials for separation processes: adsorbents, membranes, ionic liquids, solvents, metal–organic frameworks (MOFs), covalent organic frameworks (COFs), and molecularly imprinted polymers, etc.
- Green, sustainable, and low-energy separation technologies
- Petroleum refining and petrochemical separation technologies: crude oil pretreatment and electrostatic desalting, advanced distillation and adsorption for light hydrocarbon fractionation, hydrogen recovery and purification in hydrocracking, solvent deasphalting for residue upgrading, oxidative and adsorptive desulfurization, and oil–water separation in produced water treatment
- Process control, monitoring and optimization of separation systems
- Applications of AI, machine learning, and data-driven methods in separation engineering
- Experimental and computational studies related to separation processes
